Why should you call GiCor - FAQs

- What type and gauge wiring is needed for home automation? and motorized shading? Wiring for speakers, video displays & motorized window coverings require specific wiring depending on location of equipment and desired control.
- Where do I pull wiring to and what are my power source options? Line voltage, low voltage, battery or solar power are available and can save \$ if properly planned for!
- How do I want to control my system(s) and where are controls located? Proper location of switches, keypads & touch panels is important and can often be overlooked. Smart phones are an option but you should have a plan B in the event that they are unavailable or batteries are not charged.
- Do I need an IP network? In most instances the answer is yes and it must be reliable!!!
- What type of wiring is required and location with respect to multi zone audio systems? Ceiling, in-wall or wireless or invisible speakers are all options.
- How about location of cameras, security key pads and motion sensors, as well as alarm sensors? This can vary greatly depending on equipment selected and most accessible wall space.
- Access to service locations – cable, phone, power for devices also play an important factor in determining best system designs
- Budgets and timelines can also be provided on request, some charges may apply
